

SEO / GEO / AEO Audit Report

SEO 8 Strong	GEO 7 On Track	AEO 6 On Track
---	---	---

Executive Summary

MOVIEX enters launch in strong technical shape. The audit crawled 18 rendered pages of the production build and found zero broken internal links, correct per-page canonicals, structured data on every key template (WebSite + SearchAction, Organization, Movie with ratings, VideoObject, and a new FAQPage), a live sitemap covering movies, channels, free classics and custom pages, and clean robots directives. During this audit, 14 on-page issues found were fixed directly in code: a missing homepage canonical, over-length meta descriptions (300+ chars on movie pages), thin listing-page titles, missing image alt text on the genres and blog pages, and missing Organization/FAQ schema. The most urgent remaining item is environmental, not code: NEXT_PUBLIC_SITE_URL must be set at deploy or every canonical and sitemap URL will point at localhost. The clearest growth opportunity is content velocity — the blog has 4 posts, and 'OTT release date' articles are the proven traffic engine for this niche.

Dimension	Score	Status	Key Takeaway
SEO	8/10	Strong	Technical foundation is excellent post-fixes; content velocity is the gap
GEO	7/10	On Track	Entity clarity now strong (Organization + sameAs); needs authorship signals & citable original content
AEO	6/10	On Track	FAQPage schema shipped on Free Movies; question-phrased headings sitewide are the next win
Combined	21/30		

Pages Audited

URL	Page Type	Notes
/	Homepage	26-section build; 1 H1; WebSite+Organization

		schema; canonical added during audit
/movie/[id] (stree-2)	Movie detail	Movie schema w/ AggregateRating; desc re-cut to 158ch intent-first
/movies, /tv-shows, /web-series	Listings	Titles enriched with keyword phrases during audit
/trending, /latest, /genres	Listings	Genres page: 11 missing img alts fixed
/search	Search	Correctly noindexed; recent-searches UX
/free-movies	Free classics hub	FAQPage schema added; title/desc re-cut to snippet length
/free-movies/[slug]	Full-movie watch	VideoObject schema; desc re-cut to 158ch
/channel/netflix, /channel/viki	Channel pages	Title formula shortened; desc snippet-capped
/blog	Blog index	4 missing img alts fixed; canonical added
/pricing, /signin, /signup, /my-list	Utility	Auth/utility pages correctly robots-disallowed
/contact, /about-us, /privacy-policy, /terms-of-service	Info pages (content from seed source)	Root-level URLs + 308 from /p/*; in sitemap
/robots.txt, /sitemap.xml	Crawl infrastructure	Valid; sitemap covers all page types

SEO Analysis — 8/10

Technical On-Page

Signal	Finding	Status
Title tags	Unique per page; movie pages use long-tail formula 'Title (Year) — Cast, Trailer & Where to Watch' (56ch). Listing titles enriched during	Good

	audit (e.g. 'Movies — Trailers, Ratings & Where to Watch'). Free-movies & channel titles re-cut to <62ch.	
Meta descriptions	Present sitewide. Movie/classic/channel desc's were 184–300ch (truncated in SERPs); re-cut during audit to ~158ch with the call-to-action FIRST.	Good
Canonicals	Per-page canonicals on all indexable templates; homepage canonical was missing and was added during audit. /p/* legacy URLs 308-redirect to root pages.	Good
Heading hierarchy	Exactly one H1 per page; keyword-bearing H2s per section with descriptive subheadings.	Good
Image alt text	MovieCard/BigCard/posters all carry descriptive alts; genres (11) and blog (4) gaps fixed during audit.	Good
Internal links	Zero broken links across 40+ unique internal URLs crawled; no '#' dead links; channel pages cross-link all channels.	Good
URL structure	Keyword slugs everywhere: movie URLs carry title slugs (tmdb-m-1234-title, backwards-compatible), pages at root level (/contact), channels/classics named.	Good
Robots & indexability	robots.txt valid; admin/api/account/auth surfaces disallowed; /search noindexed by meta.	Good
Open Graph / Twitter	og:title/desc/image + twitter cards on all templates;	Good

	dedicated.opengraph-image route; metadataBase set.	
Deploy config	NEXT_PUBLIC_SITE_URL unset in build environment — canonicals/sitemap resolve to localhost until set in Vercel. Set it AT DEPLOY.	Needs Attention

Content Quality

Signal	Finding	Status
Homepage depth	26 sections, ~143k chars rendered text, live-updating rows — exceptional freshness signal.	Good
Movie page depth	Synopsis + cast + info tables + About prose + reviews + related — strong template depth.	Good
Blog volume	Only 4 posts. This is the biggest organic-growth gap; 'OTT release date' posts are this niche's proven traffic engine.	Needs Attention
Info pages	Contact/About/Privacy/Terms content is substantive, honest about what the site is (E-E-A-T positive), cross-linked, and now at root URLs in the sitemap.	Good

Structured Data

Signal	Finding	Status
WebSite + SearchAction	Sitewide; enables sitelinks searchbox.	Good
Movie + AggregateRating	On movie pages; rich-result (star ratings) eligible.	Good
VideoObject	On free-movie watch pages with embedUrl — video rich-	Good

	result eligible.	
Organization	Added during audit: name, url, logo, email, sameAs socials.	Good
FAQPage	Added during audit on /free-movies (3 Q&As matching visible prose).	Good

GEO Analysis — 7/10

E-E-A-T Assessment

Signal	Finding	Status
About page	Clearly explains what the site is and is NOT (no hosting/piracy) — exactly the transparency AI engines reward.	Good
Contact information	Real contact email on Contact page + Organization schema email.	Good
Author signals	Blog posts lack named authors/bylines with credentials.	Needs Attention
Entity declaration	Organization schema + consistent brand naming; sameAs wired to dashboard social settings (fill them in!).	Good

Content for AI Synthesis

Signal	Finding	Status
Factual density	Movie pages carry structured facts (ratings, votes, runtime, cast) AI engines can cite.	Good
Clear claims	Free-movies page states its core claim (60-year copyright rule) plainly — highly citable.	Good

Original content	Most text is TMDB-derived; original editorial (reviews, 'why watch' takes, release calendars) would make the site quotable rather than just aggregative.	Needs Attention
Comprehensiveness	Where-to-watch answers are live and region-aware — a genuinely differentiated data point.	Good

Technical GEO

Signal	Finding	Status
HTTPS + security headers	HSTS, XCTO, XFO, referrer-policy, permissions-policy configured.	Good
Crawlability	Server-rendered HTML (no JS-only content); AI crawlers see full pages.	Good
JustWatch/TMDB attribution	Correct attribution present (licensing + trust).	Good

AEO Analysis — 6/10

Featured Snippet Eligibility

Signal	Finding	Status
Direct answers	Free-movies explainer answers 'is this legal?' in extractable prose + FAQPage schema.	Good
Definition patterns	About page defines the site in 'X is...' form.	Good
Question-phrased headings	Rare outside free-movies ('How is this free — and legal?'). Blog/movie templates use noun headings.	Needs Attention

List/table content	Top-10 rows exist visually; no ItemList schema yet.	Needs Attention
--------------------	---	-----------------

Structured Answer Formats

Signal	Finding	Status
FAQ schema	Live on /free-movies (added during audit); not yet on movie pages or blog posts.	Needs Attention
HowTo schema	No how-to content yet (candidate: 'How to watch X in Pakistan/India' posts).	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational copy	Section subheadings are natural-language ('Movies playing in theatres right now').	Good
Long-tail coverage	Movie titles target 'where to watch X' — the top voice query shape for this niche.	Good

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Set NEXT_PUBLIC_SITE_URL (and CRON_SECRET) in Vercel at deploy — until then every canonical, OG URL and sitemap entry says localhost	SEO	5 min	Very High
High	Publish 1–2	SEO/GEO	Ongoing	Very High

	blog posts weekly targeting '[movie] OTT release date' + add author bylines with a short bio			
High	After deploy: Search Console property + submit sitemap; enable Vercel Analytics & Speed Insights toggles	SEO	15 min	High
Medium	Add ItemList schema to Top-10 sections and BreadcrumbList to movie/channel pages	AEO	1–2 hrs	Medium
Medium	Extend FAQPage schema to movie pages (auto-generate 'Where can I watch X?' / 'Is X on Netflix?' from live provider data)	AEO	2 hrs	High
Quick Win	Fill Dashboard → Settings social links so Organization sameAs emits (entity graph)	GEO	5 min	Medium
Quick Win	Update footer '© 2024 · Demo project' to dynamic year + real positioning line	SEO	5 min	Low

What's Working Well

✓ Zero broken internal links across the entire crawl — every footer, nav, card and cross-link resolves
✓ Five schema types deployed (WebSite+SearchAction, Organization, Movie+AggregateRating, VideoObject, FAQPage)
✓ Region-aware Where-to-Watch: visitors in India, Pakistan, Bangladesh etc. each see their own real availability — differentiated, honest data
✓ Live sitemap covering movies (name-slugged URLs), channels, free classics, blog, genres, people AND custom pages
✓ Honest positioning throughout ('discovery site, not streaming') — strong E-E-A-T and zero piracy-adjacent language
✓ Legal free-movies section with public-domain classics — unique, link-worthy content no competitor clone has
✓ Performance: self-hosted fonts & logos, click-to-load trailers, TMDB preconnect, 6h API caching, single fetch wave

Glossary

SEO (Search Engine Optimization): making pages rank in classic search results — technical health, keywords, links, content.

GEO (Generative Engine Optimization): making AI answer engines (Perplexity, ChatGPT Search, Gemini, Google AI Overviews) understand, trust and CITE your site — entity clarity, authority signals, citable facts.

AEO (Answer Engine Optimization): winning featured snippets, People-Also-Ask boxes and voice answers — question-phrased headings, concise extractable answers, FAQ/HowTo schema.
